

# NEW DIMENSIONS

In quality grounding straps (shunts) & solderless terminals.

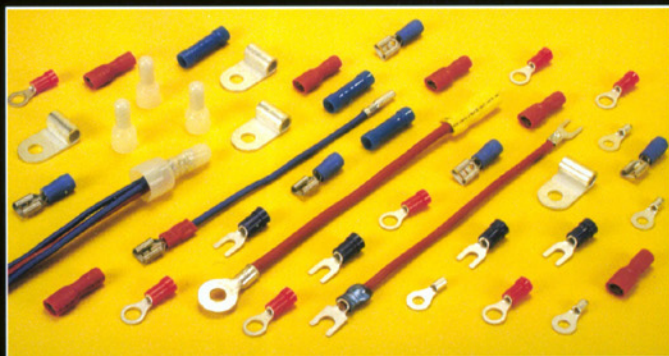

## QUALITY GROUNDING STRAPS (SHUNTS)

From the company known worldwide for reliability, engineering, service, value, and above all The Quality Connection, JST has a solution for your every application. From the simplest to the most complex; whether its a terminal, splice, or grounding strap (shunt), JST has the product. We not only stock a myriad of standard items...we can quickly develop special configurations to suit your needs. JST grounding straps (shunts) are fabricated by wrapping the end of the braided wire with high quality electrical copper, then applying high pressure to form a solderless, uniform quality configuration. In fact, these grounding straps will withstand punishing vibration up to 6 times longer than soldered products. Call, or check our web site for further details today!

## SOLDERLESS TERMINALS & SPLICES

JST offers a wide variety of quality chain terminals. They're manufactured to rigid quality standards for extra durability and long life. Choose from ring & fork tongues, male & female disconnects, low insertion force female disconnects, bullet, splice, button contact, cluster socket, & microswitch connector. And, JST has industry standard application tooling and production capability to meet your needs.
